

# CMSE 202 Final Project Sports 2 Group 15

Nick Mouaikel, Zane Shango, Tony Tedesco

# Question

• Is it possible to predict a college basketball team's number of wins on a season, based on their statistics?

| TEAM            | CONF | G  | W  | ADJOE | ADJDE | BARTHAG | EFG_O | EFG_D | TOR  | •••• | FTRD | 2P_0 | 2P_D | 3P_O | 3P_D | ADJ_T | WAB  | POSTSEASON | SEED | YEAR |

### Goal

 To use machine learning to predict the total amount of wins for each team and conference in men's division 1 college basketball based on team statistics gathered over the last 6 years.

#### **Data**

- Our data is a spreadsheet that contains team statistics of all division 1 men's basketball teams over the past six years
- Data comes from the free data site kaggle.com

|      | TEAM              | CONF | G  | w  | ADJOE | ADJDE | BARTHAG | EFG_O | EFG_D | TOR  | <br>FTRD | 2P_0 | 2P_D | 3P_0 | 3P_D | ADJ_T | WAB  |

# **Data (Variables used)**

- The data is individual team statistics, here is an explanation for each statistic or variable
- 'G': Games Played
- 'W': Wins
- 'ADJOE': Adjusted Offensive Efficiency (An estimate of the offensive efficiency (points scored per 100 possessions) a team
- 'ADJDE': Adjusted Defensive Efficiency (An estimate of the defensive efficiency (points allowed per 100 possessions) a team
- 'BARTHAG': Power Rating (Chance of beating an average Division I team)
- 'EFG\_O': Effective Field Goal Percentage Shot
- 'EFG\_D': Effective Field Goal Percentage Allowed
- 'TOR': Turnover Percentage Allowed (Turnover Rate)
- 'TORD': Turnover Percentage Committed (Steal Rate)
- 'ORB': Offensive Rebound Percentage
- 'DRB': Defensive Rebound Percentage
- 'FTR': Free Throw Rate (How often the given team shoots Free Throws)
- 'FTRD': Free Throw Rate Allowed
- '2P O': Two-Point Shooting Percentage
- '2P D': Two-Point Shooting Percentage Allowed
- '3P O': Three-Point Shooting Percentage
- '3P\_D': Three-Point Shooting Percentage Allowed
- 'ADJ\_T': Adjusted Tempo (An estimate of the tempo (possessions per 40 minutes) a team would have against the team
- 'WAB': Wins above bubble

# Methodology

 Using machine learning based on the aforementioned variables use the data from 2015-2019 as our train data to predict the wins for each team in 2020 and compare our accuracy to the actual total number of wins

## Model

 We conducted a linear regression of wins on the team stats to see which stats are most associated with wins

|    | Variable | Coefficient |
|----|----------|-------------|
| 0  | ADJOE    | -0.184692   |
| 1  | ADJDE    | 0.349388    |
| 2  | BARTHAG  | -2.871174   |
| 3  | EFG_O    | 1.107144    |
| 4  | EFG_D    | -0.995670   |
| 5  | TOR      | -0.488813   |
| 6  | TORD     | 0.760188    |
| 7  | ORB      | 0.212232    |
| 8  | DRB      | -0.422526   |
| 9  | FTR      | 0.023990    |
| 10 | FTRD     | -0.105644   |
| 11 | 2P_O     | -0.364252   |
| 12 | 2P_D     | 0.177252    |
| 13 | 3P_O     | -0.284535   |
| 14 | 3P_D     | 0.059212    |
| 15 | ADJ_T    | 0.081056    |
| 16 | WAB      | 0.818737    |

#### Model

```
# function for predicting team wins in each conference
    def total win predict(past data, pred data):
        confs = pred data.CONF.unique()
        accuracy scores = []

This graph shows the average Wins above bubble (Cutoff between making the NCAA tournament and not making it). This graph shows that some conferences have a better chance at making the tournament than other conferences.

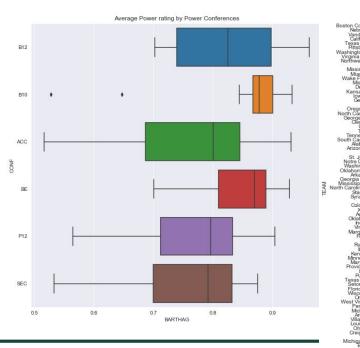

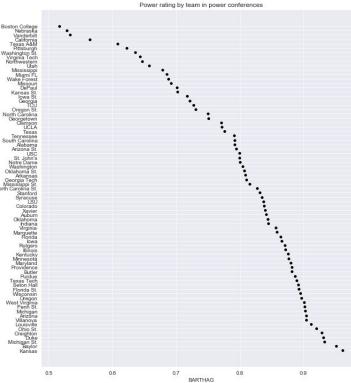

This graph is the predicted wins it takes to make the NCAA tournament. The cutoff is zero but is not limited to zero. By this graph the estimated wins it takes to make the tournament is about 23 wins.

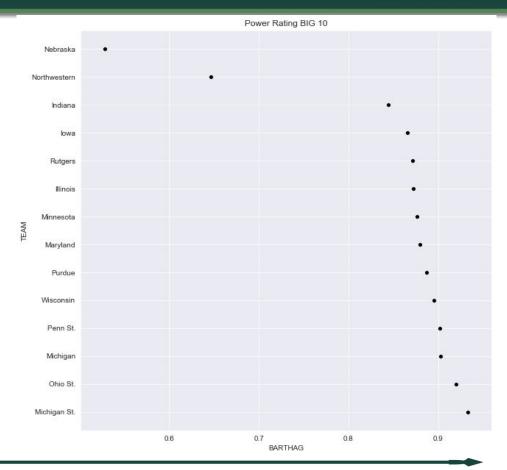

These graphs show the Power Ratings by power conference (left) and by team in those conferences (right).

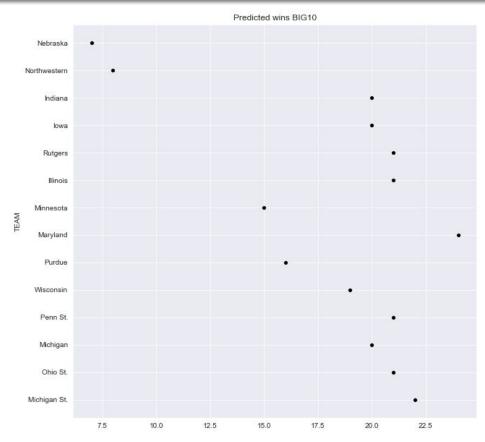

Power rating just in the BIG 10.

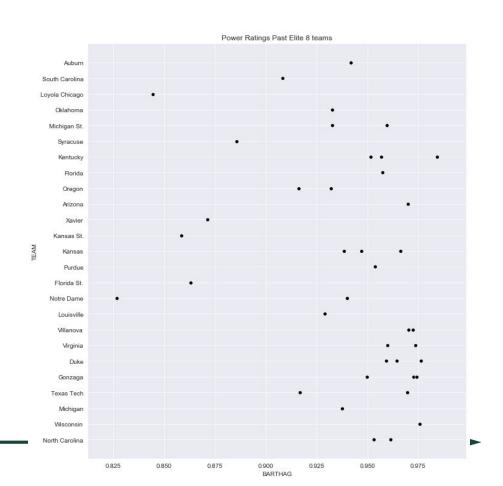

Predicted wins for BIG 10 teams.

Power rating for teams who have made the Elite 8 or further in the past 6 years.

### Conclusion

 There are many factors in sports that are difficult to calculate that will affect wins and losses such as: luck, coaching ability, a team's ability to handle pressure, individual player injuries, and players or teams simply having "off nights".
